

Init coef.:

$\text{Gammap} = 23.8888897 \cdot 10^{-3};$

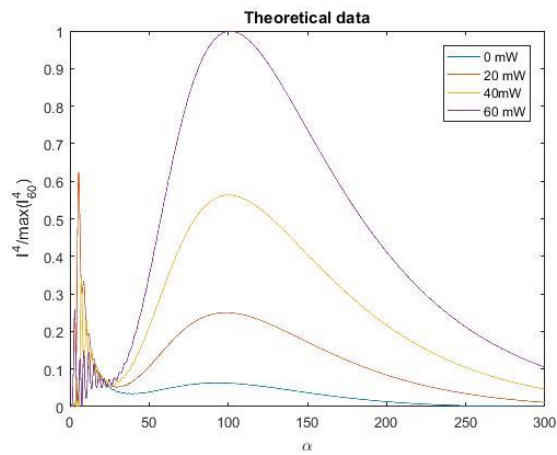

$\text{Gammam} = 24.5506112 \cdot 10^{-3};$

$j_{0p} = 7.40600014 \cdot 10^{-3};$

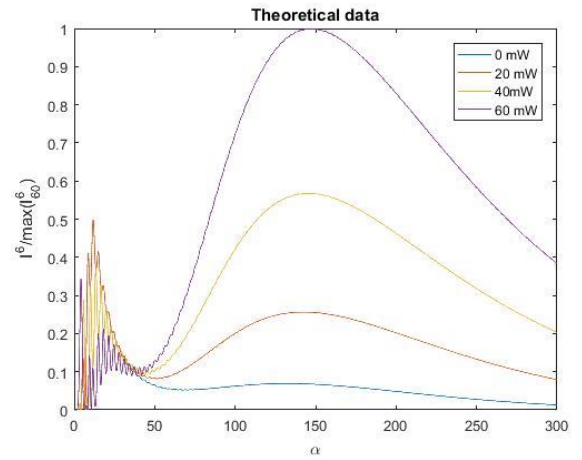

$j_{0m} = 8.08399963 \cdot 10^{-3};$

Preparation:

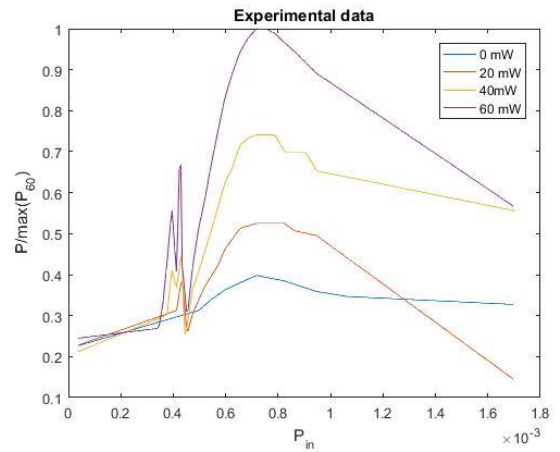

The data have been divided by the maximum value of all elements of the set.

4th harmonic

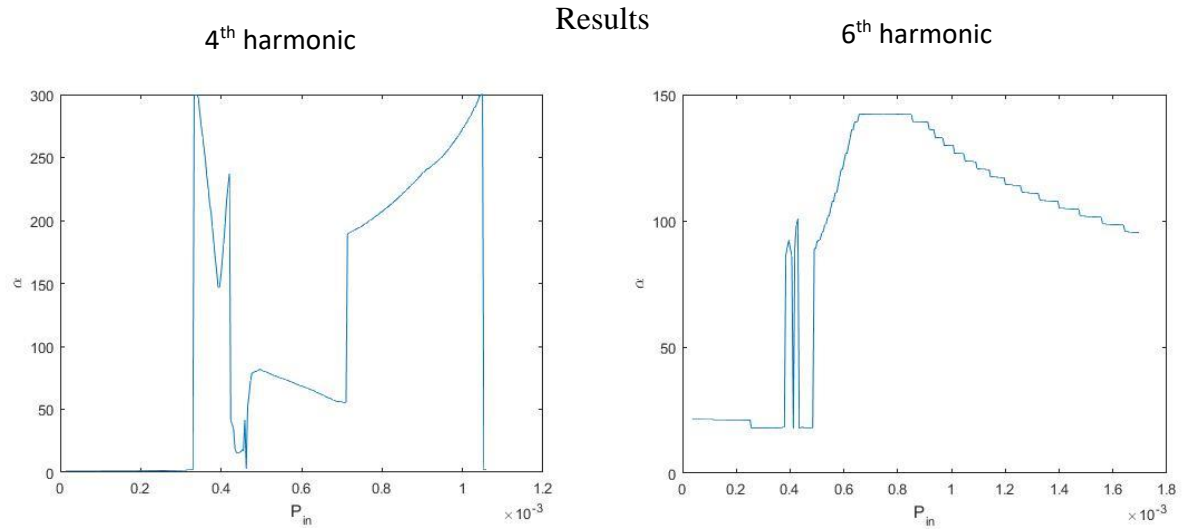

6th harmonic

Results:

The α has been calculated for every point of experimental set (300 points).

Calculation time is approx. 17 minutes. The time was obtained because a set of theoretical data was obtained in advance.

The difference of experimental data and theoretical data for selected α -value
